

They should be able to

1. Show understanding of binary magnitudes and the difference between binary prefixes and decimal prefixes
2. Show understanding of different number systems
3. Perform binary addition and subtraction
4. Describe practical applications where **Binary Coded Decimal** (**BCD**) and **Hexadecimal** are used
5. Show understanding of and be able to represent character data in its internal binary form, depending on the character set used
6. Show understanding of how data for a **bitmapped image** are encoded
7. Perform calculations to estimate the file size for a **bitmap image**
8. Show understanding of the effects of changing elements of a **bitmap image** on the image quality and file size
9. Show understanding of how data for a **vector graphic** are encoded
10. Justify the use of a **bitmap image** or a **vector graphic** for a given task
11. Show understanding of how sound is represented and encoded
12. Show understanding of the impact of changing the **sampling rate** and **resolution**
13. Show understanding of the need for and examples of the use of **compression**
14. Show understanding of **lossy** and **lossless** compression and justify the use of a method in a given situation
15. Show understanding of how a text file, **bitmap image**, **vector graphic** and sound file can be compressed

通信

They should be able to

1. Show understanding of the purpose and benefits of networking devices
2. Show understanding of the characteristics of a **LAN** (local area network) and a **WAN** (wide area network)
3. Explain the **client-server** and **peer-to-peer** models of networked computers
4. Show understanding of **thin-client** and **thick-client** and the differences between them
5. Show understanding of the **bus**, **star**, **mesh** and **hybrid** topologies
6. Show understanding of **cloud computing**
7. Show understanding of the differences between and implications of the use of wireless and wired networks
8. Describe the hardware that is used to support a **LAN**
9. Describe the role and function of a **router** in a network
10. Show understanding of **Ethernet** and how collisions are detected and avoided
11. Show understanding of **bit streaming**
12. Show understanding of the differences between the World Wide Web (WWW) and the internet
13. Describe the hardware that is used to support the internet
14. Explain the use of **IP addresses** in the transmission of data over the internet
15. Explain how a **Uniform Resource Locator** (**URL**) is used to locate a resource on the **World Wide Web** (**WWW**) and the role of the **Domain Name Service** (**DNS**)

硬件

They should be able to

1. Show understanding of the need for **input**, **output**, **primary memory** and **secondary** (including removable) **storage**
2. Show understanding of **embedded systems**
3. Describe the principal operations of hardware devices
4. Show understanding of the use of **buffers**
5. Explain the differences between **Random Access Memory** (**RAM**) and **Read Only Memory** (**ROM**)
6. Explain the differences between **Static RAM** (**SRAM**) and **Dynamic RAM** (**DRAM**)
7. Explain the difference between **Programmable ROM** (**PROM**), **Erasable Programmable ROM** (**EPROM**) and **Electrically Erasable Programmable ROM** (**EEPROM**)
8. Show an understanding of **monitoring** and **control systems**
9. Use the following logic gate symbols: [NOT, AND, OR, NAND, NOR, XOR]
10. Understand and define the functions of: **NOT**, **AND**, **OR**, **NAND**, **NOR** and **XOR** (**EOR**) gates
11. Construct the **truth table** for each of the logic gates above
12. Construct a **logic circuit**
13. Construct a **truth table**
14. Construct a **logic expression**

They should be able to

1. Show understanding of the basic **Von Neumann** model for a computer system and the **stored program concept**
2. Show understanding of the purpose and role of **registers**, including the difference between **general purpose** and **special purpose registers**
3. Show understanding of the purpose and roles of the **Arithmetic and Logic Unit** (ALU), **Control Unit** (CU) and **system clock**, **Immediate Access Store** (IAS)
4. Show understanding of how data are transferred between various components of the computer system using the **address bus**, **data bus** and **control bus**
5. Show understanding of how factors contribute to the performance of the computer system
6. Understand how different **ports** provide connection to peripheral devices
7. Describe the stages of the **Fetch-Execute** (F-E) cycle
8. Show understanding of the purpose of **interrupts**
9. Show understanding of the relationship between **assembly language** and **machine code**
10. Describe the different stages of the assembly process for a **two-pass assembler**
11. Trace a given simple assembly language program
12. Show understanding that a set of instructions are grouped
13. Show understanding of and be able to use different **modes of addressing**
14. Show understanding of and perform **binary shifts**
15. Show understanding of how **bit manipulation** can be used to monitor/control a device
16. Instruction Label \
17. AND #n / Bn / &n
18. AND <address>
19. XOR #n / Bn / &n
20. XOR <address>
21. OR #n / Bn / &n
22. OR <address>
23. LSL #n
24. LSR #n
25. <label>: <opcode> <operand>
26. <label>: <data>
27. All questions will assume there is only one general purpose register available (Accumulator) ACC denotes Accumulator IX denotes Index Register <address> can be an absolute or symbolic address # denotes a denary number, e.g. #123 B denotes a binary number, e.g. B01001010 & denotes a hexadecimal number, e.g. &4A

They should be able to

1. Explain why a computer system requires an **Operating System** (OS)
2. Explain the key management tasks carried out by the Operating System
3. Show understanding of the need for typical **utility software** provided with an Operating System
4. Show understanding of **program libraries**
5. Show understanding of the need for:
 - **assembler** software for the translation of an **assembly language** program
 - a **compiler** for the translation of a high-level language program
 - an **interpreter** for translation and execution of a high-level language program
6. Explain the benefits and drawbacks of using either a compiler or interpreter and justify the use of each
7. Show awareness that high-level language programs may be partially compiled and partially interpreted, such as Java (console mode)
8. Describe features found in a typical **Integrated Development Environment** (IDE)

They should be able to

1. Explain the difference between the terms **security**, **privacy** and **integrity** of data
2. Show appreciation of the need for both the **security of data** and the **security of the computer system**
3. Describe **security measures** designed to protect computer systems, ranging from the stand-alone PC to a network of computers
4. Show understanding of the **threats** to computer and data security posed by networks and the internet
5. Describe methods that can be used to restrict the risks posed by threats
6. Describe security methods designed to protect the security of data
7. Describe how **data validation** and **data verification** help protect the **integrity** of data
8. Describe and use methods of **data validation**
9. Describe and use methods of **data verification** during data entry and data transfer

数据库

They should be able to

1. Show understanding of the limitations of using a **file-based approach** for the storage and retrieval of data
2. Describe the features of a **relational database** that address the limitations of a file-based approach
3. Show understanding of and use the terminology associated with a relational database model
4. Use an **entity-relationship** (E-R) diagram to document a database design
5. Show understanding of the **normalisation** process
6. Explain why a given set of database tables are, or are not, in 3NF
7. Produce a normalised database design for a description of a database, a given set of data, or a given set of tables
8. Show understanding of the features provided by a **Database Management System** (**DBMS**) that address the issues of a file based approach
9. Show understanding of how software tools found within a **DBMS** are used in practice
10. Show understanding that the **DBMS** carries out all creation/modification of the database structure using its **Data Definition Language** (**DDL**)
11. Show understanding that the **DBMS** carries out all queries and maintenance of data using its **DML**
12. Show understanding that the industry standard for both **DDL** and **DML** is **Structured Query Language** (**SQL**)
13. Understand given **SQL** (**DDL**) statements and be able to write simple **SQL** (**DDL**) statements using a sub-set of statements
14. Write an **SQL** script to query or modify data (**DML**) which are stored in (at most two) database tables

They should be able to

1. Show an understanding of **abstraction**
2. Describe and use **decomposition**
3. Show understanding that an **algorithm** is a solution to a problem expressed as a sequence of defined steps
4. Use suitable identifier names for the representation of data used by a problem and represent these using an **identifier table**
5. Write **pseudocode** that contains input, process and output
6. Write **pseudocode** using the three basic constructs of **sequence**, **selection** and **iteration** (repetition)
7. Document a simple **algorithm** using a structured English description, a **flowchart** or **pseudocode**
8. Write **pseudocode** from:
 - a structured English description
 - a **flowchart**
9. Draw a **flowchart** from:
 - a structured English description
 - **pseudocode**
10. Describe and use the process of **stepwise refinement** to express an algorithm to a level of detail from which the task may be programmed
11. Use logic statements to define parts of an algorithm solution

Homework set from the Library	Any unused exercise sheet above Holiday homework pack	

They should be able to

- 1. Select and use appropriate **data types** for a problem solution
- 2. Show understanding of the purpose of a **record structure** to hold a set of data of different data types under one identifier
- 3. Use the technical terms associated with **arrays**
- 4. Select a suitable data structure (**1D** or **2D array**) to use for a given task
- 5. Write pseudocode for 1D and 2D arrays
- 6. Write pseudocode to process array data
- 7. Show understanding of why **files** are needed
- 8. Write pseudocode to handle **text files** that consist of one or more lines
- 9. Show understanding that an **ADT** is a collection of data and a set of operations on those data
- 10. Show understanding that a **stack**, **queue** and **linked list** are examples of **ADTs**
- 11. Use a **stack**, **queue** and **linked list** to store data
- 12. Describe how a **queue**, **stack** and **linked list** can be implemented using **arrays**

They should be able to

1. Implement and write **pseudocode** from a given design presented as either a **program flowchart** or **structured English**
2. Write **pseudocode** statements for:
 - the declaration and initialisation of **constants**
 - the declaration of **variables**
 - the assignment of values to **variables**
 - expressions involving any of the arithmetic or logical operators input from the keyboard and output to the console
3. Use built-in functions and library routines
4. Use **pseudocode** to write:
 - an 'IF' statement including the 'ELSE' clause and nested IF statements
 - a 'CASE' structure
 - a 'count-controlled' loop
 - a 'post-condition' loop
 - a 'pre-condition' loop
5. Justify why one loop structure may be better suited to solve a problem than the others
6. Define and use a **procedure**
7. Explain where in the construction of an algorithm it would be appropriate to use a **procedure**
8. Use **parameters**
9. Define and use a **function**
10. Explain where in the construction of an algorithm it is appropriate to use a **function**
11. Use the terminology associated with **procedures** and **functions**
12. Write efficient **pseudocode**

软件开发

They should be able to

1. Show understanding of the purpose of a **development life cycle**
2. Show understanding of the need for different **development life cycles** depending on the program being developed
3. Describe the principles, benefits and drawbacks of each type of **life cycle**
4. Show understanding of the **analysis**, **design**, **coding**, **testing** and **maintenance** stages in the **program development life cycle**
5. Use a **structure chart** to decompose a problem into sub-tasks and express the **parameters** passed between the various modules/procedures/functions which are part of the algorithm design
6. Show understanding of the purpose of **state-transition diagrams** to document an algorithm
7. Show understanding of ways of exposing and avoiding faults in programs
8. Locate and identify the different types of errors
9. Correct identified errors
10. Show understanding of the methods of testing available and select appropriate data for a given method
11. Show understanding of the need for a test strategy and test plan and their likely contents
12. Choose appropriate test data for a test plan
13. Show understanding of the need for continuing maintenance of a system and the differences between each type of maintenance
14. Analyse an existing program and make amendments to enhance functionality
