

32 What is a possible charge on a particle?

- A** $6.40 \times 10^{-20} \text{ C}$
- B** $4.00 \times 10^{-19} \text{ C}$
- C** $1.12 \times 10^{-18} \text{ C}$
- D** $9.11 \times 10^{-18} \text{ C}$

A-Level Physics: w25 14

35 A wire carries a current of 5.6 A.

What is the number of conduction electrons that pass a point on the wire in a time of 20 s?

- A** 1.8×10^{18}
- B** 2.2×10^{19}
- C** 3.5×10^{19}
- D** 7.0×10^{20}

A-Level Physics: s25 12

34 A resistor of resistance 200Ω is connected to a supply that has a p.d. of 4.00 V.

How many electrons enter the resistor in 4.00 s?

- A** 3.13×10^{16}
- B** 1.25×10^{17}
- C** 5.00×10^{17}
- D** 1.25×10^{21}

A-Level Physics: s25 13

4 A sample of material has cross-sectional area A and length L . The temperatures at the two sides of the sample are T_1 and T_2 . Thermal energy Q is transferred through the sample in time t .

These quantities are related by

$$\frac{Q}{t} = \frac{k \times A \times (T_1 - T_2)}{L}$$

where k is a constant.

What are the SI base units of k ?

- A** $\text{kg m s}^{-3} \text{ } ^\circ\text{C}^{-1}$
- B** $\text{kg m s}^{-3} \text{ K}^{-1}$
- C** $\text{kg m s}^{-1} \text{ } ^\circ\text{C}^{-1}$
- D** $\text{kg m s}^{-1} \text{ K}^{-1}$

32 The current I in a metallic conductor of cross-sectional area A is given by

$$I = Anve$$

where e is the elementary charge and v is the mean drift velocity of the conduction electrons.

What is represented by the letter n in the equation?

- A** density of conduction electrons
- B** number of conduction electrons per unit time
- C** number of conduction electrons per unit volume
- D** volume of conduction electrons

29 The resistance of a lamp is $10\ \Omega$ and the potential difference across it is $6.0\ \text{V}$.

How many electrons pass through the lamp in a time of 24 hours?

- A** 5.2×10^4 **B** 9.0×10^{19} **C** 5.4×10^{21} **D** 3.2×10^{23}

30 Two cylindrical conductors, X and Y, are made from the same material. The conductors have equal lengths, but Y has a smaller diameter than X.

X and Y are connected in series to a cell.

Which row compares the number of charge carriers per unit time passing through X and through Y and compares the average drift speed of the charge carriers in X and in Y?

	number of charge carriers per unit time	average drift speed of charge carriers
A	Y greater than X	Y greater than X
B	Y same as X	Y same as X
C	Y greater than X	Y same as X
D	Y same as X	Y greater than X

- 6 A cylindrical copper wire P of length 0.24 m is shown in Fig. 6.1.

Fig. 6.1 (not to scale)

The current in the wire is 0.85 A.

The resistance of the wire is 3.3 m Ω .

The **total** number of charge carriers N in the wire is 2.6×10^{22} .

The resistivity of copper is $1.8 \times 10^{-8} \Omega \text{ m}$.

- (a) Calculate the potential difference between the two ends of the wire.

potential difference = V [2]

- (b) (i) Show that the cross-sectional area of the wire is $1.3 \times 10^{-6} \text{ m}^2$.

[2]

- (ii) Show that the number density of charge carriers in the wire is $8.3 \times 10^{28} \text{ m}^{-3}$.

[1]

- (iii) Calculate the average drift speed of the charge carriers (electrons) in the wire.

average drift speed = ^③ ms^{-1} [2]

- (c) A different copper wire Q has the same volume as wire P, but non-uniform radius, as shown in Fig. 6.2.

Fig. 6.2 (not to scale)

The radius r_1 at end X of wire Q is the same as the radius of wire P. Radius r_2 is less than r_1 .

- (i) State and explain how the resistance of wire Q compares with the resistance of wire P.

.....

.....

.....

.....

.....

.....

..... [4]

- (ii) On Fig. 6.3, sketch a graph of the variation of the average drift speed of the charge carriers with distance from end X of wire Q.

Fig. 6.3
