

8 Groups and trends – Part 2

Name: _____ Class: _____ Date: _____

Vocabulary 词汇

Write each word three times. 把每个单词抄写三遍。

English	中文	Write it 3 times (English)		
Group VII	第七族	_____	_____	_____
transition elements	ele- 过渡元素	_____	_____	_____
noble gases	稀有气体	_____	_____	_____
halogens	卤素	_____	_____	_____
diatomic	双原子	_____	_____	_____
coloured compounds	com- 有色化合物	_____	_____	_____
catalysts	催化剂	_____	_____	_____
monatomic	单原子	_____	_____	_____

Recall

From Part 1 you know Group I gets more reactive down the group. Here we look at **Group VII** 第七族 (the opposite trend), the **transition elements** 过渡元素, and the **noble gases** 稀有气体.

- Group VII = the **halogens** 卤素.
- The transition metals sit in the middle of the table.

Nothing here is hard — it just compares groups.

New ideas

Read these first, then do the Practice.

■ 1 Group VII — the halogens

The **halogens** 卤素 (chlorine, bromine, iodine) are **diatomic** 双原子 non-metals:

Halogen	At room temperature
chlorine	pale yellow-green gas
bromine	red-brown liquid
iodine	grey-black solid

Going **down** Group VII, **reactivity decreases** — the **opposite** of Group I.

A more reactive halogen **displaces** a less reactive one from its salt:

■ 2 Transition elements and noble gases

- **transition elements** 过渡元素 (middle of the table) have **high melting points**, form **coloured compounds** 有色化合物, are good **catalysts** 催化剂, and have **variable oxidation numbers** (e.g. iron(II) and iron(III)).
- **noble gases** 稀有气体 (Group VIII) are **unreactive**, **monatomic** 单原子 gases — they already have a **full outer shell**.

Watch out: Group VII (halogens) gets **less** reactive *down* the group — the opposite of Group I. A more reactive halogen **displaces** a less reactive one from its salt. Noble gases are unreactive because their outer shell is already **full**.

Practice

Try these in order.

8.1 Give the colour and state of (a) chlorine, (b) iodine. [2]

8.2 State the trend in reactivity going down Group VII. [1]

8.3 Write the equation for chlorine reacting with potassium bromide, and state the colour change. [2]

8.4 State two properties of the transition elements. [2]

8.5 Why are the noble gases unreactive? [1]

8.6 Challenge. Will bromine displace chlorine from potassium chloride solution? Explain your answer. [2]
