

**Question 3** (Answer: **A**)

- A movement \*along\* the PPC means producing more of one good and less of the other.
- It happens when resources are switched between the two uses.
- A shift of the whole curve would need more resources or better technology.

**Question 21** (Answer: **B**)

- An economy on its PPC is using all its resources.
- A recession leaves resources idle, so production moves to a point \*inside\* the curve.
- If workers permanently lose their skills, the curve itself shifts inwards – capacity is lost.

**Question 3** (Answer: **C**)

- A point on the PPC uses all resources, so more of one good means less of the other.
- Capital goods add to future productive capacity; consumer goods do not.
- So choosing more capital goods now means less consumption now but faster growth later.

**Question 3** (Answer: **C**)

- A point \*on\* the PPC means all resources are being used.
- Producing more of one good therefore requires producing less of the other.
- That trade-off along the curve is the opportunity cost.

**Question 3** (Answer: **A**)

- A point \*inside\* the PPC means resources are unemployed or used inefficiently.
- A point \*on\* it means full and efficient use.
- A point \*outside\* is unattainable with current resources and technology.

Some reference may be made to economic theory, with occasional understanding.                                                                                                                                                                                                                                                                                                                                                                                                          |
|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |   | 0            | A mark of zero should be awarded for no creditable content.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

**Question 3** (Answer: **A**)

- An outward shift of the PPC means more of both goods can be produced.
- That needs more resources, better technology or a more skilled workforce.
- A movement \*along\* the curve would just be a change in the mix of the two goods.

2(d)

**Discuss whether or not free trade will increase economic growth.**

In assessing each answer, use the table opposite.

Why it might:

- may enable countries to specialise on what they are best at producing
- higher competition may increase productivity and lower costs of production, increasing demand for their products
- may enable firms to buy raw materials and capital goods at a lower price
- may give firms access to larger markets, enabling them to expand output.

Why it might not:

- may prevent infant industry from growing
- may speed up the closure of declining industries
- may replace domestic output with imports
- may reduce tax revenue
- firms may gain monopoly power and may restrict output
- firms may engage in unfair competition e.g. dumping.
