

**Question 28** (Answer: C)

- Free trade brings lower prices, greater choice, larger markets and economies of scale.
- Those are all genuine benefits.
- What it does \*not\* protect is domestic industry – infant and declining industries can be damaged.

|      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| 5(a) | <p><b>Identify a difference between an export and an import.</b></p> <p>Export is a good or service that leaves the country / sold to another country (1), import is a good or service that enters the country / bought from another country (1).<br/>         Export is a credit item in the current account of the balance of payments (1) imports are a debit item (1).<br/>         Foreigners spend on exports (1) the home country's population spend on imports (1).<br/>         Exports lead to money coming into an economy (1), while imports lead to money going out of an economy (1).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| 5(b) | <p><b>Explain why commercial banks may increase their lending.</b></p> <p>Logical explanation which might include:</p> <p>To increase profits / revenue (1) earn more interest / high interest rates (1) as most commercial banks are in the private sector (1) main aim is likely to be profit maximisation (1).<br/>         Increase in demand for loans (1) due to low interest rates (1) increase optimism about the future (1) higher demand for bank loans may increase profits (1).<br/>         Increased confidence loans will be repaid (1) due to e.g. rise in incomes (1).<br/>         Increase in bank deposits (1) more money to lend (1).<br/>         Take advantage of economies of scale (1) lower average costs (1).<br/>         Central bank / government encouragement / (expansionary) monetary policy / instructions (1) to increase total demand / increase consumer spending / increase investment (1).<br/>         To promote social welfare (1) by reducing poverty (1).<br/>         To keep up with competitors (1) attract more customers / gain more market share (1).</p> |

5(c)

**Analyse how an ageing population may affect a country's economic growth rate.**

Coherent analysis which might include:

- May increase economic growth / GDP / output (1) as an ageing population may have experience (1) more productive / more efficient / more skilled (1).
- May have more spending power (1) increase total demand (1).
- May train young workers to be more reliable / older workers may be more reliable (1).
- May reduce economic growth / GDP / output (1) as may have out-of-date skills / not able to operate new technology (1) lack mobility (1).
- More retired people / more economically inactive people (1) may mean a decrease in size of the labour force (1) increase dependency ratio / more dependents (1).
- May save more (1) reducing total demand (1).
- May be less healthy workers (1) more days absent from work due to sickness (1).
- The government may have to spend more on state benefits / pensions / healthcare (1) lower tax revenue (1) reducing spending on items that could increase economic growth e.g. education, infrastructure / opportunity cost (1).

5(d)

**Discuss whether supply-side policy measures will reduce a government's budget deficit.**

In assessing each answer, use the table opposite.

Why they might:

- education and training may raise productivity
- increase economic growth and employment
- raise direct and indirect tax revenue
- privatisation may reduce government spending to support state-owned firms
- revenue will be raised from the sale of privatised firms
- privatised firms may earn high profits which may raise tax revenue
- subsidies may encourage firms to expand and earn higher profits
- unemployment benefit may be cut to increase incentive to work.
- budget deficit may be increased in short term but reduced in the long term.

Why they might not:

- education and training will increase government spending and may not be successful
- lower tax rates may reduce tax revenue
- regulation will involve costs to enforce
- spending on infrastructure projects may involve high government spending.
- sale of profitable government-owned firms to the private sector may reduce government revenue from profits

5(d)

**Question 27** (Answer: A)

- International specialisation is encouraged when goods can move freely between countries.
- Free trade allows each country to concentrate on what it does relatively best.
- Tariffs and immobility are barriers – they discourage specialisation.

**Question 27** (Answer: D)

- Specialisation at national level lets a country concentrate on what it does relatively best.
- That raises output, lowers costs and allows economies of scale.
- The \*disadvantages\* are dependency on other countries and vulnerability to demand changes.
