

20 Central ideas, details and the scope of a claim

Name: _____ Class: _____ Date: _____ **Total: 13 marks**

KEY WORDS central idea • inference • evidence • detail • scope

Objective

- Distinguish the passage’s central claim from a supporting example
- Interpret details without widening their stated scope
- Choose an accurate summary covering the whole passage

Original public practice; marks below are classroom self-check points, not official criteria.

1 Key knowledge and worked examples

Read for the passage’s controlling relationship: a problem and response, a contrast, an explanation or a qualified claim. A topic label such as museum collections identifies the subject but not what the author says about it. State the main point in a short sentence before comparing options.

A supporting detail _____ illustrates, explains or qualifies that point. It may be memorable without being the central idea _____. If the passage gives two examples of improved access, a summary about only one example is too narrow. If it reports one collection, a conclusion about all collections is too broad.

Preserve scope and certainty. Some, may and in this study are meaningful limitations. An answer can reuse the passage’s vocabulary while changing its claim from possible to guaranteed. Check the answer’s subject, action and qualification against the passage, not simply the number of shared words.

When a question asks about a specific detail, answer that narrower task rather than choosing the central idea by habit. Locate the relevant sentence, read nearby context and distinguish what is directly stated from a proposed reason. Prior subject knowledge is unnecessary and should not supply missing evidence _____.

The central idea is the relationship that holds the passage together. Read: “The repair café first accepted only lamps. It later added small fans after volunteers received training. Large appliances still went to specialist shops.” A sound summary is: the café expanded its repairs within limits. “It repaired everything” ignores the last sentence. “It repaired lamps” omits the change.

Original diagram of the worked relationship; read the full wording and qualifications.

Worked example from the native lesson: Original passage: “The town archive digitised its most frequently requested maps first. Researchers could then inspect those maps remotely, reducing repeated handling of fragile originals. Staff continued to offer supervised access to items not yet scanned.” Central idea: selective digitisation improved access and protection while physical access continued. “All maps became available online” overstates coverage; “the archive ended visits” contradicts the final sentence.

■ Complete original case context

Original passage: The city archive began a trial in which readers could search handwritten shipping registers using an online index. Volunteers entered names and dates, while staff checked entries that were difficult to read. The index often helped researchers locate a likely page before travelling to the archive. It did not replace the register images: two people with the same name could still be distinguished only by reading nearby entries. Staff therefore described the index as a route into the records rather than a final answer to every question. They also kept a public list of corrected entries so that researchers could see how the index changed.

2 Practice

2.1 Original passage: “A library added evening hours for commuters. Daytime hours remained unchanged, and weekend opening was still limited.” Which best states the main point? ^[1]

- **A** Evening access expanded without a general expansion of every opening period.
- **B** The library stopped opening during the day.
- **C** All readers prefer evening visits.
- **D** Weekend access became unlimited.

2.2 Original passage: “A library added evening hours for commuters. Daytime hours remained unchanged, and weekend opening was still limited.” Which detail is explicitly stated? [1]

- **A** The library moved buildings.
- **B** Daytime hours remained unchanged.
- **C** Commuters avoid books.
- **D** Weekend hours doubled.

2.3 A statement applying to “some sites” should not be rewritten as applying to _____ sites. [1]

2.4 An answer containing a true example must be the best summary. [1]

3 Exam-style questions

Use the complete original case context in section 1.

3.1 State the central idea in one sentence, preserving both benefit and limit. [3]

3.2 Which detail explains why register images remain necessary? Distinguish that from the purpose of the corrections list. [3]

3.3 Reject each proposed summary with specific evidence – A “Volunteers replaced staff”; B “The index made all archive visits unnecessary”; C “The archive hid changes to the index”. [3]

Solutions

Authored self-check guidance: accept equivalent correct methods and supported interpretations. The points check reasoning, not an official grade.

2.1 A – The first preserves the change and its limits. B contradicts unchanged daytime hours; C invents all readers’ preferences; D contradicts limited weekends.

Correct response linked to the given case.

2.2 B – Option B is explicitly stated. Moving buildings, reader preferences and doubled weekend hours are not stated. A invents a move; C invents commuter behaviour; D invents a numerical weekend change.

Correct response linked to the given case.

2.3 all – All widens the claim beyond its stated scope.

Correct response linked to the given case.

2.4 False – It may omit the broader claim or other important details.

Correct response linked to the given case.

3.1 The checked index helps researchers find relevant records, but consulting the underlying register remains necessary for some distinctions. This covers the search benefit and same-name limitation without claiming complete accuracy.

Sound conclusion or proposed method. Relevant supporting steps or textual evidence. Accurate conditions, checks or qualification.

3.2 People with the same name may require nearby register entries to distinguish them. The corrections list instead makes revisions visible; it does not itself identify every person.

Sound conclusion or proposed method. Relevant supporting steps or textual evidence. Accurate conditions, checks or qualification.

3.3 A contradicts staff checking difficult entries. B overstates “often” and the need to consult underlying records; the passage does not say every visit is replaced. C contradicts the public corrections list. None preserves the stated scope.

Sound conclusion or proposed method. Relevant supporting steps or textual evidence. Accurate conditions, checks or qualification.
